

YOUR INPUT IS IMPORTANT!

The goal of the City's Storm Water Management Program is to ensure that the City's storm drainage system is properly working to help prevent flooding and to protect Water Quality!

The MS4 survey is used to collect information to help set priorities for stormwater management, drainage practices and stormwater programs for the City. Your participation is vital to keeping the water resources of our community healthy. The results of this survey are anonymous and strictly for stormwater program development.

The survey will be included in a future utility bill; however, you may choose to complete the survey online at: <https://www.surveymonkey.com/r/SHVVCHT>

Under federal regulations, the City of Los Banos is required to implement stormwater activities that include public education and outreach, illicit discharge elimination, construction site runoff control, and pollution prevention for municipal operations.
